The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over White in view of Japan (279).

White teaches figs. 8B, 8C a surface acoustic wave actuator arranged on a first surface of piezoelectric material and using at least first thru forth comb-shaped electrodes to propagate waves along X and Y axis. Appropriate drive circuitry and a mover are provided (see figs. 1-5 and 12-14). White does not provide a permanent magnet on the mover cooperating with a move holder sandwiching the piezoelectric substrate. However, Japan (279) teaches a single axis surface acoustic wave motor using a permanent magnet to apply a hold down pressure to the move over and above that provided by gravity to improve coupling with the driving acoustic waves. For at least this reason it would have been obvious to one of ordinary skill in the art to provide Whites mover with a permanent magnet and mover holder as taught by Japan (279).

Claim 2 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Further cited of interest (acoustic wave actuators) are Asai (511), Yoshida, Asai (113) and Tsukimoto and Shin (magnetic pre-load or hold down for acoustic wave motors.
